To prepare a buffer with a pH of 4.00 using $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}$, $\left(\mathrm{pK}_{\mathrm{a}}=4.19\right)$ and its conjugate base, what concentration ratio of $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{-}$to $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}$ must be used?
Henderson-Hasselbalch equation: $\mathrm{pH}=\mathrm{pKa}-\log \left([\mathrm{HA}] /\left[\mathrm{A}^{-}\right]\right)$

$$
\mathrm{pH}=\mathrm{pKa}+\log ([\mathrm{A}] /[\mathrm{HA}])
$$

## Consider a probe, HA, that is only glows in the deprotonated ( $\mathrm{A}^{-}$) state.

The $\mathrm{pK}_{\mathrm{a}}$ of the probe is 10.0 , and the pH of blood is 7.4.

## Which of the following is true?

1. Most of the probe will be in the deprotonated form ( $\mathrm{A}^{-}$) form in the bloodstream and glow.
2. Most of the probe will be in the protonated (HA) form in the bloodstream and not glow.
3. The ratio will be $50 \% 50 \%$ in the bloodstream.
4. More information is required.

## Consider a probe, HA, that is only glows in the deprotonated ( $\mathrm{A}^{-}$) state.

The $\mathrm{pK}_{\mathrm{a}}$ of the probe is 10.0 , and the pH of blood is 7.4.
Which of the following is true?
$25 \%$ 1. Most of the probe will be in the deprotonated form $\left(\mathrm{A}^{-}\right)$form in the bloodstream and glow.
$70 \%)^{2}$. Most of the probe will be in the protonated (HA) form in the bloodstream and not glow.
3. The ratio will be $50 \% 50 \%$ in the bloodstream.
4. More information is required.

## Which structure do you predict the amino acid tyrosine (Tyr) to have at pH 7.4 ?

1. Structure $A$
2. Structure B
3. Structure C
4. Structure D
5. Structure E

# Which structure do you predict the amino acid tyrosine (Tyr) to have at pH 7.4 ? 

What is the oxidation number of nitrogen in $\mathrm{N}_{2} \mathrm{O}$ ?

1. -2
2. -1
3. 0
4. +1
5. +2

What is the oxidation number of nitrogen in $\mathrm{N}_{2} \mathrm{O}$ ?

$$
