For the reaction:

$$
\mathrm{Pb}^{2+}(\mathrm{aq})+\mathrm{Zn}(\mathrm{~s}) \rightleftarrows \mathrm{Zn}^{2+}(\mathrm{aq})+\mathrm{Pb}(\mathrm{~s})
$$

1. In the forward direction, $\mathrm{Pb}^{2+}$ is reducing Zn . In the reverse direction, $\mathrm{Zn}^{2+}$ is reducing Pb .
2. In the forward direction, Zn is reducing $\mathrm{Pb}^{2+}$. In the reverse direction, $\mathrm{Zn}^{2+}$ is reducing Pb .
3. In the forward direction, Zn is reducing $\mathrm{Pb}^{2+}$. In the reverse direction, Pb is reducing $\mathrm{Zn}^{2+}$.
4. In the forward direction, Zn is reducing $\mathrm{Zn}^{2+}$. In the reverse direction, Pb is reducing $\mathrm{Pb}^{2+}$.

For the reaction:

$$
\mathrm{Pb}^{2+}(\mathrm{aq})+\mathrm{Zn}(\mathrm{~s}) \rightleftarrows \mathrm{Zn}^{2+}(\mathrm{aq})+\mathrm{Pb}(\mathrm{~s})
$$

1. In the forward direction, $\mathrm{Pb}^{2+}$ is reducing Zn . In the reverse direction, $\mathrm{Zn}^{2+}$ is reducing Pb .
2. In the forward direction, Zn is reducing $\mathrm{Pb}^{2+}$. In the reverse direction, $\mathrm{Zn}^{2+}$ is reducing Pb .
3. In the forward direction, Zn is reducing $\mathrm{Pb}^{2+}$. In the reverse direction, Pb is reducing $\mathrm{Zn}^{2+}$.
4. In the forward direction, Zn is reducing $\mathrm{Zn}^{2+}$. In the reverse direction, Pb is reducing $\mathrm{Pb}^{2+}$.

## Which is a better reducing agent?

$$
\begin{aligned}
& E^{\circ} \text { for vitamin } \mathrm{B}_{12} \text { is }-0.526 \mathrm{~V} \text {. } \\
& E^{\circ} \text { for flavodoxin is }-0.230 \mathrm{~V} \text {. }
\end{aligned}
$$

1. Neither one is better. Both have negative standard reduction potentials.
2. flavodoxin
3. vitamin B12

## Which is a better reducing agent?

$E^{\circ}$ for vitamin $\mathrm{B}_{12}$ is -0.526 V .
$E^{\circ}$ for flavodoxin is -0.230 V .
$10 \%$ 1. Neither one is better. Both have negative standard reduction potentials.
2. flavodoxin

53\% ©) 3. vitamin B12

Donor atoms are called ligands. Ligands are:

1. Lewis acids -they accept electrons
2. Lewis acids -they donate electrons
3. Lewis bases -they accept electrons
4. Lewis bases -they donate electrons

Donor atoms are called ligands. Ligands are:

| $11 \%$ | 1. | Lewis acids -they accept electrons |
| :--- | :--- | :--- |
| $29 \%$ | 2. | Lewis acids -they donate electrons |
| $7 \%$ | 3. | Lewis bases -they accept electrons |
| $52 \%$ | 4. | Lewis bases -they donate electrons |

## What are the geometries with $\mathrm{CN}=5$ ?

1. trigonal planar; square pyramidal
2. pyramidal; bipyramidal
3. trigonal bipyramidal; square pyramidal
4. see-saw; square pyramidal

## What are the geometries with $\mathrm{CN}=5$ ?

$2 \%$ 1. trigonal planar, square pyramidal 2. pyramidal; bipyramidal 3. trigonal bipyramidal; square pyramidal
4. see-saw; square pyramidal

## What is the geometry around the metal in EDTA?

1. octahedral
2. square planar
3. square pyramidal
4. tetrahedral
5. see-saw

## What is the geometry around the metal in EDTA?

## 86\% <br> 1. octahedral <br> 2. square planar <br> 3. square pyramidal <br> 4. tetrahedral <br> 5. see-saw

Determine the oxidation number and d-count for $\left[\mathrm{Co}\left(\mathrm{H}_{2} \mathrm{O}\right)_{2}\left(\mathrm{NH}_{3}\right) \mathrm{Cl}_{3}\right]^{-}$
(Hint: Co is in group 9 of the periodic table.)
a. $\quad$ oxidation number $=-1$, d-count: 10
b. $\quad$ oxidation number $=0, d-$ count: 9
c. $\quad$ oxidation number $=1, d$-count: 8
d. $\quad$ oxidation number $=2$, d-count: 7
e. $\quad$ oxidation number $=3$, d-count: 6
f. $\quad$ oxidation number $=4$, d-count: 5
g. $\quad$ oxidation number $=5$, d-count: 4
h. $\quad$ oxidation number $=6$, d-count: 3

Determine the oxidation number and d-count for $\left[\mathrm{Co}\left(\mathrm{H}_{2} \mathrm{O}\right)_{2}\left(\mathrm{NH}_{3}\right) \mathrm{Cl}_{3}\right]^{-}$
(Hint: Co is in group 9 of the periodic table.)

| 16\% | a | number $=$ |
| :---: | :---: | :---: |
| 8\% |  | idation number $=0$, d-count: 9 |
| 6\% | c. | oxidation number $=1$, d-count: 8 |
| 59\% |  | oxidation number $=2$, d-count: 7 |
| 5\% |  | xidation number $=3$, d-count: 6 |
| 4\% | f. | oxidation number $=4$, d-count: 5 |
| 1\% |  | xidation number $=5$, d-count: 4 |
| \% |  | oxidation number $=6, \mathrm{~d}$-count: |
