## Lecture 4

## Scheme

## 1. Special Forms

(a) define (sugared form) - (define (name parameters) expressions)

This form is equivalent to (define name (lambda (parameters) expressions)).
(b) let-(let bindings body)

Binds the given bindings for the duration of the body. The bindings is a list of (name value) pairs. The body consists of one or more expressions which are evaluated in order and the value of last is returned.

## Problems

1. Guess the value, then evaluate the expression in scheme. If your guess differs from the actual output, try desugaring any relevant expressions.
```
(define (foo x)
    (+ x 3))
foo
(foo 5)
(define bar 5)
(define (baz) 5)
bar
baz
```

```
(bar)
(baz)
(let ((a 3)
        (b 5))
        (+ a b))
(let ((+ *)
        (* +))
    (+ 3(* 4 5)))
(define m 3)
(let ((m (+ m 1)))
    (+ m 1))
(define n 4)
(let ((n 12)
        (o (+ n 2)))
    (* n o))
```

## Data Structures

## New procedures

1. (cons a b) - Makes a cons-cell (pair) from a and b
2. ( $\operatorname{car} c$ ) - extracts the value of the first part of the pair
3. ( $\operatorname{cdr} \mathrm{c}$ ) - extracts the value of the second part of the pair
4. ( $\left.\mathrm{c} \frac{a}{d} \frac{a}{d} \frac{a}{d} \frac{a}{d} \mathrm{r} \quad \mathrm{c}\right)$ - shortcuts
5. (list a b c ...) - builds a list of the arguments to the procedure
6. (list-ref lst n ) - returns the $n$th element of lst
7. (append 11 12) - makes a new list containing the elements of both lists
8. (null? lst) - is lst the empty list?

## Problems

2. Draw box-and-pointer for the values of the following expressions.
(list 12 3)
(cons 3 (list 1 2))
(cons 1 (cons 3 (cons 5 nil)))
(list (list 3))
3. Write expressions whose values will print out like the following.
(1 23 )
$((1) 2)(34)(56))$
$\left(\begin{array}{ll}(4 & 7\end{array}\right)$
4. Write expressions using car and cdr that will return 4 when the lst is bound to the following values:
$\left(\begin{array}{lllllll}7 & 6 & 5 & 4 & 3 & 2 & 1\end{array}\right)$
$\left(\begin{array}{ll}(7)\end{array}\left(\begin{array}{lll}6 & 5 & 4\end{array}\right)\left(\begin{array}{ll}3 & 2)\end{array}\right)\right.$
$(7(6(5(3(2(1)))))))$
(7 ((6 5 ((4)) 3) 2) 1)
