

MITOCW | 3. Tell us what happens during a typical class day.

PROFESSOR: So that depends on what time of the semester you ask me the question, and so, you know, if you ask me at the beginning, I'm basically demonstrating like how speakers work, and we're learning how to solder and things like that. In the middle, it's sort of a more classroom-y kind of thing, where we do demonstrations and explain what impedances are or how to design cabinets and that kind of thing. And then for the last few weeks, I mean, we're just building the speakers.
